

B35 Series Regulator

R, N, and M Field Service Regulator

Applications

The B35 is specially designed for safe, accurate first stage pressure reduction on high pressure gas systems. It is a versatile pounds to pounds unit which is ideal for high pressure industrial, rural, and suburban taps.

Description

With a malleable iron body, the B35 will handle inlet pressures up to 1000 PSIG. Outlet pressures range from 5 to 150 PSIG. Seven different orifices are available from 1/16" through 1/2" in either brass or stainless steel. They are interchangeable in all valve body sizes.

- > B35N – The B35N is a spring loaded field service regulator with no internal relief. Used primarily where internal relief is not required, but has a 1/4" NPT breather vent in the upper diaphragm case. This regulator has inlet pressure capabilities up to 1000 PSIG
- > B35R – The B35R can be used for multi-regulator cuts with complete safety on installations up to 1000 PSIG inlet with reductions up to 150 PSIG and ultimately to down to 7 inches of water column outlet without an external relief valve and will conform to the ANSI B31.8 standard
- > B35M – Special B35M unit with sealed throat and downstream control tap. This regulator perfectly suited to be used in monitoring installations in series with an operating regulator when a failure is sensed by the downstream control line

Benefits

- > Economical
- > Heavy duty construction with a malleable iron body.
- > Corrosion Resistant
- > Inlet pressure capabilities up to 1000 PSIG.
- > No special start up procedures
- > Polyurethane seat ensures reliable "lockup" (up to 1000 PSIG inlet pressure)
- > Outlet pressure capabilities of 5 to 150 PSIG.
- > Seven different orifices from 1/16" to 1/2" in either brass or stainless steel
- > Controlled breather orifice size eliminates pulsation and provides normal actuation at low flows
- > Relief indicator visible from long distance
- > Conforms with B31.8 standard

Features

- > Interchangeable brass or stainless steel orifice
- > Spring-loaded internal relief valve assembly
- > Field interchangeable adjustment spring
- > 3/4" NPT and 1" NPT valve bodies available
- > 14 different assembly positions
- > External indicator when the regulator has relieved

B35 Series Field Service Regulator

Shipping weight:

Six regulators per box Box weight: 80 lbs.

B35 Dimensions (inches)

Note: valve shown in closed position.

Spring Data - Spring Color Outlet Pressure Range*

Model B35	PSIG
Green	5 - 8
Orange	8 - 15
Green/white	15 - 25
Blue/white	25 - 45
Silver	40 - 75
Yellow	70 - 100

*Note: Ranges are approximations. Please contact manufacturer to obtain the best spring for your application.

Orifice Data - Wide Open Flow Coefficients and Maximum Pressures

Orifice Size (inches)	K-Factor	Maximum Operating Inlet Pressure (PSIG)	Maximum Emergency Inlet Pressure (PSIG)	Maximum Emergency Outlet Pressure (PSIG) (No Damage)	Maximum Emergency Outlet Pressure (PSIG) (Gas Containment)
1/16 x 3/32	8.9	1000 (DI body)	1200 (DI body)	150 PSIG + Outlet pressure set point	1000
3/32	17.5				
1/8	30.0				
3/16	71.0				
1/4	127.0	600 (DI body)			
3/8	290.0	300 (DI body)			

Inlet Pressure Effect*

Spring Color	Orifice Size (inches)					
	3/32	1/8	3/16	1/4	3/8	1/2
Green	400	220	140	70	50	20
Orange	380	220	130	70	40	20
Green/white	380	220	130	70	40	20
Blue/white	340	170	100	60	30	20
Silver	250	160	100	60	30	20
Yellow	220	140	90	60	30	20
Red	140	100	70	40	30	20

*Change in inlet pressure to change outlet pressure by 1 PSIG.

Operating Temperature Range

- 20°F to 150°F

Additional Specifications

Available Vent Sizes:	R Models - 3/4" (threaded NPT optional) N and M Models - 1/4" NPT
Maximum Capacity:	35,000 SCFH (see capacity tables)
Other Available Options:	Seal wire to indicate unapproved tampering 1/8" pipe plug tap on upstream side of valve body 1/4" or 1/8" NPT tap on diaphragm case (for outlet pressure measurement)

Itron takes pride in delivering American made products with the utmost concern for safety, quality, and customer satisfaction.

Construction materials:

Valve body	Ductile iron or steel
Orifice	Brass (standard), stainless steel (optional)
Valve seat	Polyurethane or nylon
Valve stem	Plated steel
Valve stem bushing	Brass
Lever pin	Stainless steel (Type 303)
Lever	Zinc and dichromate plated steel
Upper diaphragm plate	Zinc and dichromate plated steel
Lower diaphragm plate	Zinc and dichromate plated steel
Diaphragm	Buna-N and nylon reinforcing fabric
Vent screen	Stainless steel
Adjustment ferrule	Plated steel
Seal cap	Cast iron
Diaphragm case	Ductile iron
Diaphragm case screws	Steel (Torx head) -optional stainless steel with socket head

Valve Body Sizes

Body Size (inches)	Connection Type
Ductile Iron Body	
3/4" or 1"	NPT threaded

Correction factors for non-natural gas applications

The B35 may be used to control gases other than natural gas. To determine the capacity for gases other than natural gas, multiply the values within the capacity tables by a correction factor. The table below lists the correction factors for some of the more common gases:

Gas Type	Specific Gravity	Correction Factor (CF)
Air	1.00	0.77
Butane	2.01	0.55
Carbon Dioxide (Dry)	1.52	0.63
Carbon Monoxide (Dry)	0.97	0.79
Natural Gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air-Mix	1.20	0.71

To calculate the correction factor for gases not listed in the table above, use the gases' specific gravity and insert it in the formula listed below:

$$\text{Correction Factor (CF)} = \sqrt{\frac{SG_1}{SG_2}}$$

Where:

SG₁ = Specific gravity of the gas in which the capacity is published.

SG₂ = Specific gravity of the gas to be controlled.

Wide Open Flow Calculations

For wide-open orifice flow calculations use the following equations:

$$\text{For } P_1/P_2 < 1.89 \text{ use: } Q = K \sqrt{P_2(P_1 - P_2)}$$

$$\text{For } P_1/P_2 > 1.89 \text{ use: } Q = \frac{KP_1}{2}$$

Where: P₁ = Absolute Inlet Pressure (psia)

P₂ = Absolute Outlet Pressure (psia)

Q = Flow Rate (SCFH)

K = Orifice Coefficient (SCFH/psi)

Spring Ranges*

Use spring data table to obtain actual spring ranges for inlet pressures not listed.

Adjusted Outlet Pressure Range - Spring Adjustment Ferrule at Minimum and Maximum Depths				
Spring Color	Orifice Size (inches)	Inlet Pressure (PSI)	Outlet Pressure

	150	285	1000	1000	1000	500	350	300

*Note: Table body is the maximum inlet pressure that will allow the outlet pressure to stay below the value in the Maximum Outlet Pressure during a wide-open failure situation.

Point of Relief Differential Pressure Data

Orifice Difference Pressure PSIG	Outlet Pressure PSIG – without spring					
	Orifice Size (inches)					
	3/32*	1/8	3/16	1/4	3/8	1/2
50	0.5	1.0	1.5	1.5	2.0	4.0
100	0.5	1.0	1.5	2.0	2.5	7.5
200	1.0	1.5	2.5	3.5	5.0	12.5
300	2.0	2.5	4.0	5.5	8.0	20.0
400	3.0	3.5	5.5	7.5	11.5	-
500	3.5	4.5	7.5	9.5	15.0	-
600	4.0	5.5	9.5	12.0	19.0	-
700	4.5	6.5	11.5	14.5	-	-
800	5.0	7.5	14.0	17.0	-	-
900	5.5	8.0	16.0	19.5	-	-
1000	6.0	9.0	18.0	-	-	-

*Use the 3/32" orifice data for the 1/16" x 3/32" orifice.

B35R recommended maximum differential pressure above heavy line.

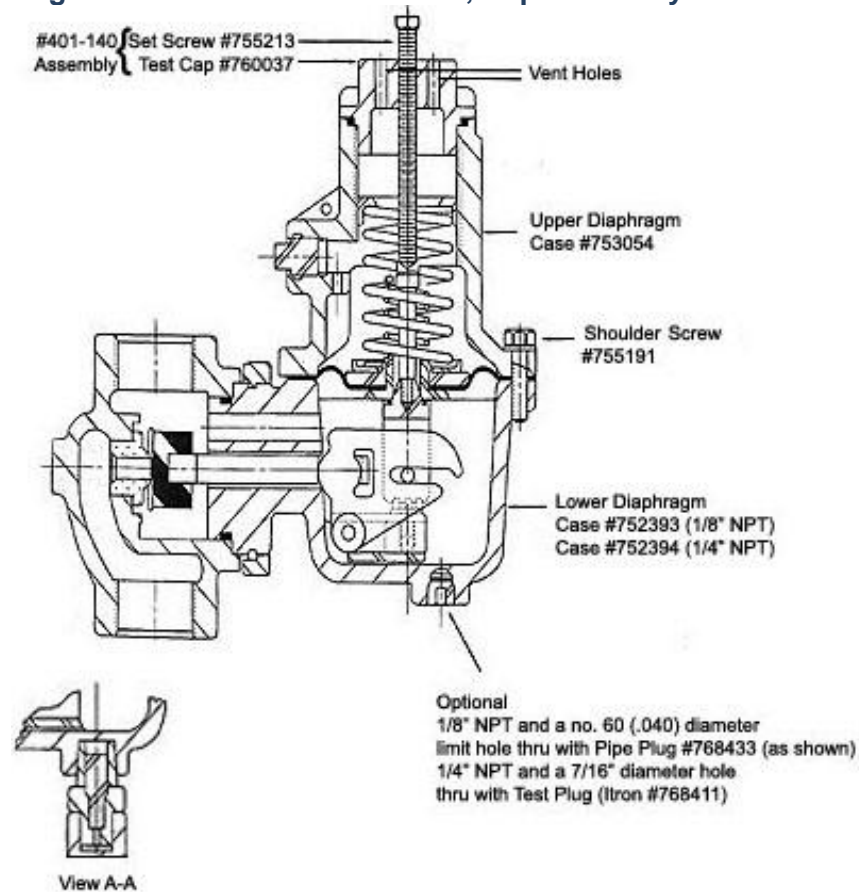

B35N recommended maximum differential pressure, as listed.

Relief Valve Spring + 14 PSIG less outlet pressure without adjusting spring. Add the remaining relief valve spring power to the adjusted outlet pressure. (For example, 400 PSI inlet to 100 PSI outlet, 1/4" orifice. 400 – 100 = 300 PSI differential pressure from above chart – 300 PSI 1/4" orifice gives 5.5 PSI outlet. 14 – 5.5 = 8.5 PSI when added to 100 PSI outlet pressure, point of relief is 108.5 PSIG.)

Operator and Monitor Installation

Regulator Field Relief Valve Test, Cap Assembly

Instructions

1. Lower Diaphragm Case
 - a. Supplied with a 1/8" pipe plug. Remove the pipe plug and fasten pressure gauge to boss.
 - b. Supplied with a 1/4" universal seal test plug. Remove closing cap on plug. Insert gauge with needle exposed. Fasten pressure gauge to plug.
2. Remove vent cap from upper diaphragm case and insert special test cap (assembly number 799073).
3. Turn adjustment set screw clockwise until the screw makes contact with the relief valve shoulder screw.
4. Continue to turn the adjustment set screw clockwise until a small volume of gas relieves from the vent holes.
5. Read the pressure gauge for point of relief.
6. Turn the adjustment set screw counterclockwise until it reseals.
7. Check the vent holes with soapy water to verify there are no leaks.

Assembly Positions

Shown: 14 basic B35 assembly positions.

Please specify the assembly position by number when ordering.

B35 Series Regulators R, N, and M Models

Torque Specifications	
Retainer plate screws	85 – 115 inch-pounds
Orifice cartridge	450 – 500 inch-pounds
Margin screws	50 – 80 inch-pounds

	760049				Vent protector for N
	720031				R diaphragm assembly
	720030				M & N diaphragm assembly
	Seal Caps- 3 Types				
	Cast Iron- Internal Relief Valve (B35R)	No vent pipe attachment. Contains stainless steel spiral vent screen plated steel guide – vent down for complete water drain. A red indicator ball stays out after Relief Valve has functioned. Indicator ball is reset manually.			
	Cast Iron- Internal Relief Valve (B35R)	For 3/4" vent pipe attachment. Similar to above cap, with 3/4" N.P.T. vent tap and without spiral vent or indicator ball.			
	No Relief (B35N)	Solid cap.			

Vent Lines for Regulators

When constructing vent lines to be attached to regulators installed indoors, follow a few basic rules:

- a. Never use pipe sizes smaller than the vent size; smaller pipe sizes restrict the gas flow. If a long gas run must be used, Itron advises increasing the pipe one nominal size every ten feet to keep the flow restriction as low as possible.
- b. Keep the vent line length as short as possible to minimize the restriction and reduce the vent's tendency to cause regulator pulsation.
- c. Support the vent pipe to eliminate strain on the regulator diaphragm case.
- d. Always point outdoor vent pipes in the downward position to reduce the possibility of rain, snow, sleet, and other moisture entering the pipe. Install a bug screen in the end of the pipe.
- e. Do not locate the vent line terminus near windows, fans, or other ventilation equipment. See the installation instructions furnished with the regulator.
- f. Adhere to all applicable codes and regulations.
- g. If your vent pipe causes regulator pulsation, consult your sales representative or manufacturer.
- h. Itron strongly recommends running a separate vent line for each regulator. Headers with various installed devices can cause regulator malfunction.

Caution Ensure the end of the vent line is away from ANY potential ignition sources. It is the installer's responsibility to ensure the vent line is exhausting to a safe environment.

Installation

Warning Itron does not endorse or warrant the completeness or accuracy of any third party regulator installation procedures or practices, unless otherwise provided in writing by Itron. Follow your company's standard operating procedures regarding the use of personal protection equipment (PPE). Adhere to guidelines issued by your company in addition to those given in this document when installing regulators.

- a. Remove all shipping plugs from the regulator inlet, outlet, and vent before installation.
- b. Verify the piping interior and regulator inlet and outlet are clean and free of dirt, pipe dope, and other debris. Dirt and other foreign materials entering the regulator can cause a loss of pressure control.
- c. Apply pipe joint sealant to the male pipe threads. Do not use pipe joint material on the regulator's female threads. Joint sealant could become lodged in the regulator and cause a loss of pressure control.
- d. Gas must flow through the regulator's valve body in the direction cast on the regulator body. Gas flowing in the wrong direction can overpressure and cause damage to the regulator.
- e. For the B42, B31, B58, B34, and B34S models, the diaphragm casing can be mounted in any position relative to the body through a full 360° angle at 90° increments. B57, B34, B35, and B38 models can be mounted in a full 360° angle.
- f. When the regulator is installed OUTDOORS, the vent must always be positioned so that rain, snow, moisture or foreign particles cannot enter the vent opening. Itron recommends positioning the vent downward to avoid entry of water or other matter which could interfere with the proper operation of the regulator. The vent should be located away from building eaves, window openings, building air intakes and above the expected snow level at the site. The vent opening should be inspected periodically to insure it does not become blocked by foreign material as outlined in DOT PHMSA-RSPA-2004-19856.
- g. When the regulator is installed INDOORS, the vent must be piped to the outside atmosphere using the shortest length of pipe, the fewest possible pipe elbows, and a pipe diameter as large as the vent size or larger. USING VENT PIPE SMALLER THAN THE VENT CONNECTION LIMITS THE REGULATOR'S INTERNAL RELIEF VALVE CAPACITY. The outlet end of the pipe must be protected from moisture and the entrance of foreign particles. The regulator should be specified by the user with the size vent and pipe threads desired to make the vent pipe connection.

Start-Up Procedure

- a. Mount a pressure gauge downstream of the regulator to monitor the downstream pressure.
- b. With the downstream pressure valve closed, slowly open the inlet valve. The outlet pressure should rise to slightly more than the set-point. Verify there are no leaks and all connections are tight.
- c. The regulator was pre-set at the factory to match order specifications. If necessary, adjust the outlet pressure by removing the seal cap on the top of the spring housing and adjusting the ferrule or screw inside the spring housing using a ratchet with a socket and an extension. With a small amount of gas flowing through the regulator, rotate the ferrule clockwise to raise the outlet pressure or counter-clockwise to lower the outlet pressure.
- d. Replace the seal cap and check for leaks after the desired outlet pressure is achieved.

The regulator is ready for operation.

Safety Warning

This product, as of the date of manufacture, is designed and tested to conform to all governmental and industry safety standards as they may apply to the manufacturer. The purchaser/user of this product must comply with all fire control, building codes, and other safety regulations governing the application, installation, operation, and general use of this regulator to avoid leaking gas hazards resulting from improper installation, startup or use of this product.

Itron strongly recommends installation by a qualified professional and periodic inspection of pressure regulators (inspections may be required by local applicable codes or regulations).

Inspections should include checking for gas quality, cycle numbers, external environmental changes, and operating conditions that impact wear on the regulator's moving parts. To ensure safe and efficient operation of this product, replace worn or damaged parts found during inspection.

The maximum inlet pressure for this regulator is dependent on the orifice size and model designation. The non-relief models are limited to 60 PSIG maximum inlet pressure unless additional safety devices are used as outlined in DOT code, OPS, Part 192, section 192.197. When these B35 Series regulators are used on petroleum gases, they should be restricted to second-stage pressure reduction in the gaseous phase.

Limited Warranty

Itron, Inc. 970 Highway 127 North, Owenton, Kentucky 40359-9302, warrants this gas product against defects in materials and workmanship for the earlier of one (1) year from the date the product is shipped by Itron or a period of one year from the date the product is installed by Itron at the original purchaser's site. During such one-year period, provided that the original purchaser continues to own the product, Itron will, at its sole option, repair any defects, replace the product or repay the purchase price.

- > This warranty will be void if the purchaser fails to observe the procedures for installation, operation or service of the product as set forth in the Operating Manual and Specifications for the product or if the defect is caused by tampering, physical abuse or misuse of the product.
- > ITRON SPECIFICALLY DISCLAIMS ALL IMPLIED WARRANTIES INCLUDING THOSE OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. UNDER NO CIRCUMSTANCES WILL ITRON BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND WHATSOEVER.
- > Itron's liability for any claim of any kind, including negligence and breach of warranty for the sale and use of any product covered by or furnished, shall in no case exceed the price allocable to the product or part thereof which gives rise to the claim.

- > In the event of a malfunction of the product, consult your Itron Service Representative or Itron Inc., 970 Highway 127 North, Owenton, Kentucky 40359-9302. See Itron Terms and Conditions of Sale for the full and complete terms of the Limited Warranty.

Ordering Information

Specify:

1. Inlet and Outlet Connection Size and Type
2. Model Number
3. Outlet pressure desired
4. Pilot needed
5. Inlet pressure range
6. Type of gas and maximum capacity required
7. Assembly position number (see chart below)
8. Special requirements such as tagging, 1/8" pipe plug tap, seal wire, etc.

About Itron Inc.

Itron Inc. is a leading technology provider to the global energy and water industries. Our company is the world's leading provider of metering, data collection and utility software solutions, with nearly 8,000 utilities worldwide relying on our technology to optimize the delivery and use of energy and water. Our products include electricity, gas and water meters, data collection and communication systems, including automated meter reading (AMR) and advanced metering infrastructure (AMI); meter data management and related software applications; as well as project management, installation, and consulting services.
